

EqualLogic PS4100 Series

The Dell™ EqualLogic™ PS4100 storage arrays are designed to provide excellent flexibility, performance and capacity for your growing business requirements. The series offers multiple configurations in drive capacities with up to 36TB of storage in 2U/3.5" options. Ideal for small or midsized companies and remote offices, the PS4100 Series offers a virtualized architecture, enterprise software and easy administration at an affordable price.

Performance and capacity where and when you need it

With the EqualLogic PS4100 Series, you do not have to make a choice between scaling storage performance or expanding capacity. The PS4100 Series can keep pace with your application demands — with 1GbE throughput — while providing simple management and seamless expansion.

Enterprise power, everyday simplicity

PS Series arrays are based on a virtualized, modular storage architecture that enables you to purchase only the storage you need when you need it. Sophisticated yet simple management features speed SAN configuration, and built-in intelligence capabilities sense network connections, automatically build RAID sets, and conduct system health checks. All PS Series arrays, regardless of generation, work together to automatically manage data, load balance across all resources or seamlessly expand the storage pool when you add a new array. The PS4100 Series also include fault-tolerant capabilities through use of fully redundant and hot-swappable controllers, fan trays, power supplies and disk drives.

Feature-rich software portfolio

The EqualLogic PS Series arrays include innovative array and host software with no additional cost or software licensing fees. EqualLogic's unique all-inclusive software licensing model allows you to continue to add new features and functionality to your existing hardware as they become available — without charge. You can deploy the latest storage innovations without a costly rip-and-replace

upgrade. PS Series arrays include enterprise-class storage software features like sub-volume automated tiering, thin provisioning and pointer-based snapshots to help you efficiently deliver the right data to the right place at the right time.

EqualLogic Host Software extends the functionality of the array-based software, optimizing server and storage cooperation. Host Integration Tools are available for major OS and hypervisor providers, including Microsoft, VMware and Linux.

SAN HQ provides an interface for monitoring your groups of EqualLogic arrays, and offers a proactive and automated support process with SupportAssist to help improve productivity and accuracy while helping you gain insight and control.

² GB means 1 billion bytes, TB equals 1 trillion bytes and PB equals 1 quadrillion bytes; actual capacity varies with preloaded material and operating environment and will be less.

³ RAID 5 is also available for non-production data, but is generally not recommended; RAID 50 is similarly not recommended for production data on drives larger than 2TB.
