

# Veeam Management Pack VMware monitoring with Microsoft System Center

"Veeam MP gives us the detailed information we need to be proactive in resolving issues. . . Veeam gives us 'eyes wide open' in the virtual environment."

**Albert Uy**  
APM Manager  
GameStop Corp.

The Veeam MP is verified by VMware as VMware Ready.

Veeam is an Elite VMware Technology Alliance Partner and a charter member of the VMware Ready Management program.

The Veeam MP is certified for Windows Server 2008 R2.

**Microsoft Partner**  
Gold Independent Software Vendor (ISV)  
Gold Virtualization  
Gold Systems Management

Extend your investments in Microsoft System Center and manage your physical and virtual environment from one console with the Veeam® Management Pack™ (MP) for VMware.

The Veeam Management Pack provides scalable, fault-tolerant and agentless VMware infrastructure monitoring and management directly in Microsoft System Center, eliminating the need for a separate monitoring framework.

## Extend your investments in System Center

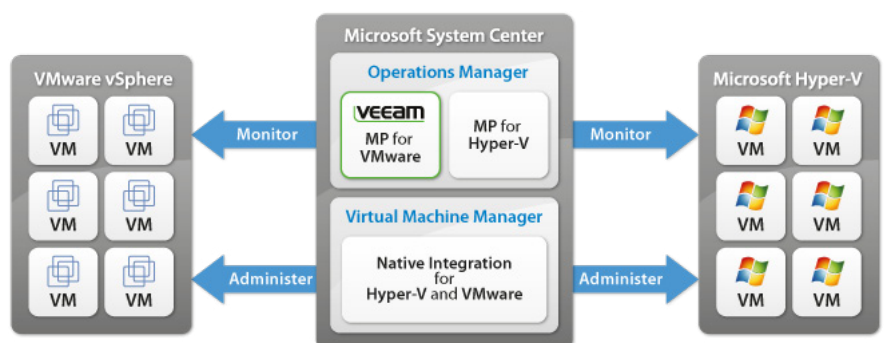

The Veeam MP leverages and extends the investments you've already made in System Center by bringing VMware into the fold. It preserves the integrity of your unified Operations Manager console and the IT policies and practices you've built around System Center. You maintain compliance even as your environment changes and grows.

## Manage everything from one console

With the Veeam MP, you can manage everything from the Operations Manager console—virtual, physical and application data. Operators have a complete view of the entire IT infrastructure, so they can identify the source of any problem and escalate it to the correct team to speed problem resolution and minimize impact on users. You get 24x7 monitoring of VMware with the operations personnel you already have in place.

## Eliminate additional monitoring frameworks

With the Veeam MP, you avoid the expense of buying, deploying, learning and maintaining another monitoring framework. You eliminate additional agents and administrative overhead and instead, leverage the expertise and the system you already have in place. And because the Veeam MP is built on System Center—and not simply connected to it—you get complete visibility and seamless management of VMware in Operations Manager.

*The Veeam Management Pack extends your investment in Microsoft System Center, unifies management of physical and virtual resources, and eliminates the expense of an additional monitoring framework.*

## Microsoft | Technology Center

Veeam is a Microsoft managed partner, and the Veeam MP is installed in MTCs around the world for customer demos and proofs of concept.

The Veeam MP has been tested and verified by Microsoft and is listed in the System Center Marketplace in Pinpoint.

### Features and Benefits

- Provides built-in VMware intelligence to increase productivity and reduce the learning curve for front-line operations staff.
- Delivers instant value with hundreds of out-of-the-box rules, monitors, topology diagrams and reports on VMware performance and events.
- Monitors dependencies among physical hosts, virtual machines, and applications and services.
- Includes enterprise-class features such as high availability, load balancing and a distributed, scalable architecture.
- Lowers administration and deployment overhead through centralized management and configuration.
- Includes full native support for new vSphere features such as vApps, Host Profiles and Distributed Power Management (DPM).

### Supported Microsoft platforms

- System Center 2012 Operations Manager
- System Center 2007 R2 Operations Manager
- System Center 2007 SP1 Operations Manager
- Microsoft Operations Manager 2005

### Supported VMware platforms

- vCenter Server 4.x and 5.0
- Virtual Center 2.5
- ESX 3.x and 4.x
- ESXi 3.5, 4.x and 5.0

## Enterprise strength

The Veeam Management Pack provides continuous monitoring of the largest, most demanding virtual environments. It features a centrally managed, distributed architecture for horizontal “no limits” scalability and automatic failover and load balancing for high availability. Optimized, user-configurable data publication methods and use of consecutive sample monitors, optimized performance providers and advanced features of System Center deliver maximum information with minimal overhead.

## Complete integration

The Veeam MP integrates fully with both VMware and System Center. It enables all System Center functionality—including alerts, diagrams, dashboards, reporting, auditing, notifications, responses and automation—for all VMware components, including vCenter Server, clusters, hosts, virtual machines, storage and hardware. It includes a detailed health model with hundreds of metrics and events, including advanced metrics such as memory and disk pressure and disk IOPS that are unique to Veeam MP, as well as a comprehensive knowledge base that serves as your VMware “expert in a box.”

While the Veeam MP itself collects VMware data agentlessly, it fully integrates application data from agents running inside virtual machines. In this way, it provides end-to-end visibility from the physical server, to the hypervisor, to the virtual machines and the applications and services running there.

## Proven architecture

The Veeam MP collects data agentlessly from the vSphere API, eliminating the “tunnel vision” of an OS agent running in the VM and the overhead, risk and limited lifespan of an agent running in the hypervisor. The Veeam MP has proven itself in more than 1000 deployments. It’s a scalable, reliable and mature solution that performs well with both VMware and System Center.
