

DEBUNKING THE MYTHS AROUND OFFICE 365 BACKUP

How NexProtect is best placed to help you

So maybe you've already implemented or planning to implement Office 365. Now your Office 365 data is in the cloud it's Microsoft's responsibility to back it up right? Read on and find out.

What restore capability does your business require from Office 365?

There are many reasons we protect our data: natural and man-made disaster, infrastructure failure. Increasingly we also backup to protect against human error or the malicious intent of both internal and external parties. Microsoft protects Office 365 data against infrastructure failure and disasters through replication but operates a shared responsibility model where the customer remains the data owner and retains joint responsibility for the security and integrity of the data. A key question to ask is: in the event of losing Office 365 data, how far would you be required to go back to retrieve it, either by the business or an external regulator?

What does Office 365 offer in the way of recoverability?

Exchange Online by default only keeps deleted items for 14 days. This can be extended to 30 days, after which time an item cannot be restored unless you have the previously put the mailbox on legal hold (only available in some Exchange Online tiers) or have put a backup or archiving solution in place. Sharepoint items once deleted are gone forever after 93 days. If Exchange items are purged from the deleted items prior to the 14-30 days it is a cumbersome multi-step process for the administrator to recover (15-30 minutes by Microsoft's estimate).

NexProtect Deleted Mail Recovery

Exchange Online Recovery via Powershell cmdlet

Exchange Online Deleted Item Recoverability

Exchange Online: 14-30 days.

NexProtect: User defined to meet your requirements.

How can NexProtect help?

The NexProtect solution helps you protect and/or archive your Office 365 data in an easy, flexible and cost-efficient way.

NEXPROTECT FOR OFFICE 365

NexProtect for Office 365 can be purchased as a stand-alone backup solution for Office 365 offering protection for Exchange Online (including calendar and contacts etc), Sharepoint and OneDrive*.

Why choose NexProtect for Office 365?

Simplicity: Single easy-to-use console manages all your NexProtect backups including Office 365.

Flexible Deployment Methods: Available as software to deploy on-premise or in the public cloud, available as a plug and play appliance (various capacities to meet your needs) or you can protect your Office 365 data directly to the NexProtect Cloud.

Efficiency: As a fully integrated solution NexProtect can globally de-duplicate your Office 365 data against any other backups

being stored in the same datastore, consuming significantly less storage and network resources as a result.

Compliance: All data is encrypted in transit and at rest. Assured Recovery can automatically test the integrity of your Office 365 backups and give you a report for auditors. NexProtect also offers GDPR compliant secure data centres in Europe.

NEXPROTECT ARCHIVING FOR OFFICE 365

In addition to backup NexProtect can also help you archive your Office 365 data for regulatory compliance. NexProtect can be supplied as software to run on-premise. Supports Exchange Online, Exchange Server, Lotus Domino, Gmail and Sendmail in a single solution. Users can search and retrieve mail via an Outlook Plug-in or web-based GUI.

Why choose NexProtect for Office 365?

Flexible Deployment Methods: Available as easy to use software that can be deployed on-premise, in the public cloud or as a service in the NexProtect Cloud. Supports a wide range of email platforms concurrently to aid your move to Office 365.

Cost Effective: Use the NexProtect Cloud and only pay for what you store after single instancing and compression. No per mailbox charges.

Compliance: All the features your Data Protection, Legal and HR departments need – lightning fast Boolean search, rolebased access, tagging, legal hold, retention policies. Easily fulfill Subject Access and Right To Deletion requests for GDPR.
