

Veeam Service Provider Console

#1 BaaS and DRaaS for Service Providers

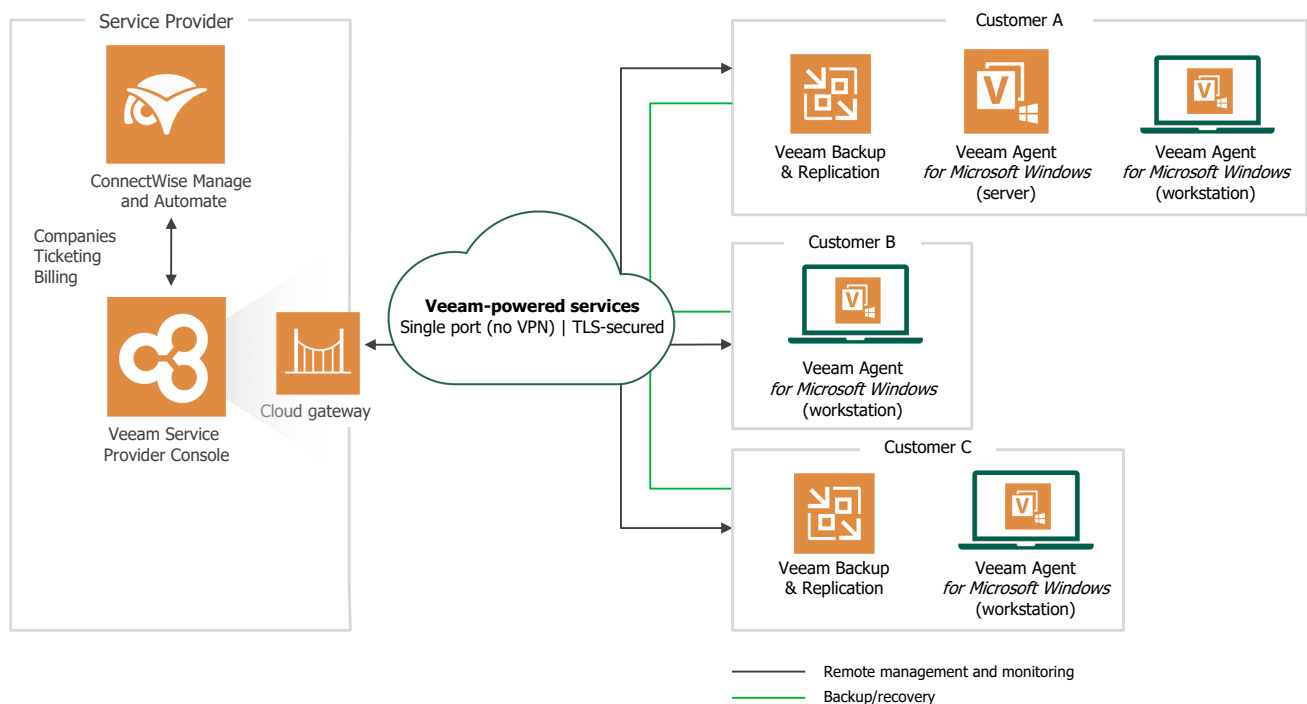

As adoption of cloud computing across organizations of all sizes continues to grow, the ability to efficiently provision, manage and monitor Availability infrastructure can be difficult. Veeam® Service Provider Console is a cloud-enabled platform built specifically for Veeam Cloud & Service Providers (VCSPs) and resellers looking to launch a managed services business.

With out-of-the-box multi-tenancy support, it's simple to get started, onboard customers and remotely manage, monitor and bill for your services. Service Providers can now take advantage of enhanced integrations with ConnectWise, the industry leader in business management for the full lifecycle of technology service delivery. And the single, web-based user interface reduces administration complexities and makes it easy to stay on top of every one of your customers, and their Availability.

By leveraging the Veeam Cloud Connect framework, Veeam Service Provider Console is capable of managing virtual, physical and cloud-based Veeam Availability solutions – including Veeam Backup & Replication™ and Veeam Agent for Microsoft Windows – without the need for direct connectivity.

Get Started today

1. Apply for the VCSP program. Its FREE
2. Once Approved, get your free rental key
3. Provision Veeam Service Provider Console in your private infrastructure, or the public cloud

Simplified setup

Whether you're a tenured service provider or a reseller just starting out with managed services, Veeam Service Provider Console's flexible install options make getting started simple. Deploy in your own infrastructure or leverage the public cloud. Create new or add existing customers in just a few clicks thanks to the intuitive onboarding wizard that makes it easy to configure and deliver services in line with your customers' Availability objectives.

Automated, remote Veeam backup agent deployment

Easily discover all the components of your business' Veeam environment – whether it's virtual, physical, cloud-based or a mixture – using network-based IP range discovery, Active Directory or .csv file.

Once discovered, managing Veeam Backup & Replication instances, as well as deploying and managing Veeam Agent for *Microsoft Windows* is simple, allowing you to gain complete visibility and control over all the backup workloads you need to manage.

Remote monitoring and management for backups and replicas

The power of Veeam Service Provider Console presents all the components of your entire Veeam environment. The multi-tenant interface provides you with detailed job and health status in a quick summary, or more detailed information on a department-by-department or job-by-job basis.

Remote management of backups and replicas couldn't be simpler, using the single, powerful web-based UI. And, because Veeam Service Provider Console leverages the power of Veeam cloud gateways, data is securely transferred over a TLS connection using a single port – there is no need for any VPN or MPLS connectivity.

Automated usage reporting

Automated usage reporting that is consolidated into a single report makes billing your customers straightforward and effortless, with less time spent aggregating points and workload counts. The RESTful API means you can integrate Veeam Service Provider Console with your existing billing applications, but because billing functionality is also built in, you have everything you need to get started without manually crunch numbers in spreadsheets. Setup plan pricing on a per-service or per-customer basis and Veeam Service Provider Console handles the rest, with white-labeling capabilities to deliver branded invoices with your own logo.

Native integrations with ConnectWise

Veeam Service Provider Console's native integration with ConnectWise Manage and Automate makes it easy for service providers to deliver more value to their customers while reducing administration by consolidating the management, monitoring, servicing and billing of multiple services – including data protection – into a single pane of glass.

Get your customers' data off site and into your cloud

Veeam makes it easy to not only remotely manage and monitor your customers' Availability infrastructure, but also send their backups and replicas to your hosted cloud infrastructure. Through tight integration with Veeam Cloud Connect for Service Providers, you can deliver even more value to your customers through Backup as a Service (BaaS) and Disaster Recovery-as a Service (DRaaS) offerings.
